For: **University of Blefuscu**
Master of Science in Genetics Program

MOTIVATION LETTER

Dear Madams / Sirs,

With this letter I hereby wish to apply and state my motivation for enrolment in Master of Genetics Program at the University of Blefuscu, bearing in mind my sincere desire to continue my academic education and explore my research potential on the prestigious institution such as yours. Besides strong personal commitment to challenge myself within the new scientific environment, the most important reasons for me to apply for your master program are the possibility of interdisciplinary research, professional perspective, and expand my practical knowledge about genetics and genetic engineering.

During my undergraduate studies and professional engagements, I have noticed the fact that students and young researchers in Lilliput are deprived of more practical work and implementation of theoretical knowledge. Because of that situation, the scientific and research liberty of young researchers in my country are quite limited. For instance, as a Laboratory Intern at the Institute of Molecular Genetics and Genetic Engineering oftentimes limited available resources prevented our team from fulfilling researches and scientific experiments. Consequently, the science in my country depends significantly on foreign, modern equipped laboratories. That is precisely the main reason why I see your Master Program as a great opportunity to learn from distinguished experts in the field and test my ideas in the top research institutes.

Furthermore, I see myself as a very hard-working and responsible scientist, with an appreciable theoretical background and significant advancement potential. During my undergraduate studies and professional engagements I have demonstrated a clear ability to integrate my knowledge in the process of creating new ideas and hypotheses making. Despite limited resources, working in the Institute of Molecular Genetics and Genetic Engineering I have learned from my mentors how to improvise and use my creativity within time-sensitive deadlines.

Additionally, my excellent academic records at the Faculty of Biology, University of Lilliput, recommended me for several positions at the Centre for the Promotion of Science and Science Festival. Working mainly with children and teenagers I have learned the importance of scientific communication, and how to present complex scientific problems in a way that anyone could understand. Indeed, much of the population in Lilliput and more generally, do not have a clear understanding of Genetic Engineering, its importance and potential applications in agriculture, medicine and environment protection. Therefore, I consider this Master Program as an important extension of my previous professional activities and potential to learn more about Genetic Engineering promotion in Lilliput and the region, as well.

Supplementary to my academic and professional engagements, I have been involved in various extra-curricular activities because I wanted to grasp as much knowledge as possible. In 2015 and 2016 I volunteered during organization and coordination of the mountain race named "Like a Dragon", on Paloma Mountain in Lilliput, because I am truly passionate about hiking and nature. Also, in August 2012 I got an opportunity to visit Jopaloma as a volunteer in Young Researchers of Lilliput network, where I have helped locals with agricultural activities, alongside 15 other volunteers coming from different corners of the world. For that reason, I truly believe that international experience will motivate me even more to prosper in further academic and professional career, and to create strong bonds with fellow colleagues from different countries and cultures, at the same time learning from the best professors and experts your University has to offer.

By admitting me into your Program, you will provide me with an opportunity to pursue my passion because I am nothing but an eager, diligent and dedicated student, searching to expand new horizons and solve problems in a creative and innovative way, while being guided by acclaimed professionals found teaching at your Institution. With that in mind, I am applying for your Program, therefore taking a first step toward my goal of becoming a respectable expert in my country.

Appreciating the fact that this Program is very competitive, attracting highly motivated applicants, I am convinced that my excellent academic records, my previous professional experience, personal dedication towards learning and practicing the science of Genetics and Genetic Engineering will give me considerable chances to be selected.

Thereupon, I would be honored if you decide to accept my candidature.

Respectfully,

Jane JOHNSON
